

Neutral ABL: matched five-hour comparison

$96^3 \cdot \Delta x = 31.25 \text{ m} \cdot \Delta z = 10.42 \text{ m} \cdot \text{fixed local } u^* = 0.5 \text{ m/s} \cdot 4\text{--}5 \text{ h means}$

— WENO9 control — WENO9 + SLD (one face, 300 s)

Six true 600 s mean profiles per hour. Native-face moments; skewness masked for $w^2 \leq 10^{-5} \text{ m}^2/\text{s}^2$.
One seed, no observational or LES reference: this tests response, not accuracy.
